The Poems of Ben Jonson Tom Cain 2021-11-30 Ben Jonson, who was with Shakespeare and Marlowe one of three principal playwrights of his age, was also one of its most original and influential poets. Known best for the country house poem 'To Penshurst' and his moving elegy 'On my First Son', his work inspired the whole generation of seventeenth-century poets who declared themselves the 'Sons of Ben'. This edition brings his three major verse publications, Epigrams (1616), The Forest (1616), and Underwood (1641) together with his large body of uncollected poems to create the largest collection of Jonson's verse that has been published. It thus gives readers a comprehensive view of the wide range of his achievement, from satirical epigrams through graceful lyrics to tender epitaphs. Though he is often seen as the preeminent English poet of the plain style, Jonson employed a wealth of topical and classical allusion and a compressed syntax which mean his poetry can require as much annotation for the modern reader as that of his friend John Donne. This edition not only provides comprehensive explanation and contextualization aimed at student and non-specialist readers alike, but presents the poems in a modern spelling and punctuation that brings Jonson's poetry to life.

Suddenly there's nothing wrong with his hydraulics--that is, as long as Delilah is the woman in his arms. Amaury's Hellion Vampire Amaury LeSang is cursed to feel everybody's emotions like a permanent migraine. The only way to alleviate the pain is through sex. Gabriel's Mate After Maya is turned into a vampire against her will, vampire and Scanguards bodyguard Gabriel is charged with protecting her and finding her attacker. Even as the sexual tension between them rises and the rogue vampire closes in on them, Gabriel refuses to give into his desire. Despite the intimacies they share, Gabriel fears that if he ever reveals himself fully to her, Maya will react like other women have, running from him, and calling him a monster, a freak, a creature not worth her love. Yvette's Haven After being kidnapped by a vampire hunter, vampire bodyguard Yvette's first instinct is to kill the bastard. But before she gets the chance, she realizes that he was double-crossed by the witch he was working for and now is in as much danger as she is. To get his brother out of trouble, bounty hunter / vampire slayer Haven has to deliver the young actress Kimberly to a witch. Unfortunately, she's protected by the very creature he hates most: a vampire. Zane's Redemption The last thing vampire bodyguard Zane wants to do is to guard a hybrid, a half-vampire, half-human, whose father wants to keep her a virgin. Trying to find the last of his torturers is his only goal in life. Portia is a young hybrid with a serious dilemma: in a few weeks, her body will be set in its final vampire form. If she is to avoid having to live out her immortal life as a virgin, she must find a lover in that short time--something her father hires Zane to prevent. Quinn's Undying Rose Vampire bodyguard Quinn has lived the last 200 years as a playboy trying in vain to forget the only woman he has ever loved: his human wife Rose, who he believes to be dead. Scientific and Statistical Database Management Marianne Winslett 2009-05-22 This volume contains the proceedings of SSDBM 2009, the 21st International Conference on Scientific and Statistical Database Management. SSDBM 2009 took place during June 2-4, 2009, at the Hotel Monteleone in New Orleans, USA. The SSDBM conference series brings together scientific domain experts, database researchers, practitioners, and developers for the presentation and change of current research concepts, tools, and techniques for scientific and statistical database applications. SSDBM organizers strive to provide a stimulating environment to encourage discussion, fellowship, and exchange of ideas in all aspects of research related to scientific and statistical databases, including both original research contributions and insights from practical system design, implementation, and evaluation. SSDBM 2009 received 76 submissions from 18 countries. Each submission was reviewed by three Program Committee members, leading to the acceptance of 29 long papers and 12 short papers. The short papers include a mix of demonstrations, poster papers, and traditional conference presentations. This year we had the goal of increasing our acceptance rate while maintaining or increasing the quality of our papers; to this end, 17 of our accepted papers were shepherded. This year we also benefited from three invited talks. Our keynote presentation was from Kate Keahey of Argonne National Laboratory, who talked about scientific computing on cloud platforms. Bertrand Ludascher from the University of California Davis explained what makes scientific work powerful and efficient, and Arie Shoshani gave an overview of new technology developed at the Scientific Data Management Center at Lawrence Berkeley National Laboratory for exploring scientific datasets.

Activity Recognition in Pervasive Intelligent Environments

LIMING CHEN 2011-05-04 This book consists of a number of chapters addressing different aspects of activity recognition, roughly in three main categories of topics. The first topic will be focused on activity modeling, representation and reasoning using mathematical models, knowledge representation formalisms and AI techniques. The second topic will concentrate on activity recognition methods and algorithms. Apart from traditional methods based on data mining and machine learning, we are particularly interested in novel approaches/techniques based on ontology-based approach, that facilitate data integration, sharing and automatic/automated processing. In the third topic we intend to cover novel architectures and frameworks for activity recognition, which are scalable and applicable to large scale distributed dynamic environments. In addition, this topic will also include the underpinning technological infrastructure, i.e. tools and APIs, that supports function/capability sharing and reuse, and rapid development and deployment of technological solutions. The fourth category of topic will be dedicated to representative applications of activity recognition in intelligent environments, which address the life cycle of activity recognition and their use for novel functions of the end-user systems with comprehensive implementation, prototyping and evaluation. This will include a wide range of application scenarios, such as smart homes, intelligent games and cars.

Medical Data Privacy Handbook Aris Gkoulalas-Divanis 2015-11-26 This handbook covers electronic medical record (EMR) systems, which enable the storage, management, and sharing of massive amounts of demographic, diagnosis, medication, and genomic information. It presents privacy-preserving methods for medical data, ranging from laboratory test results to doctors' comments. The reuse of EMR data can greatly benefit medical science and practice, but must be performed in a privacy-preserving way according to data sharing policies and regulations. Written by world-renowned leaders in this field, each chapter offers a survey of a research direction or a solution to problems in established and emerging research areas. The authors explore scenarios and techniques for facilitating the anonymization of different types of medical data, as well as various data mining tasks. Other chapters present methods for emerging data privacy applications and medical text de-identification, including detailed surveys of deployed systems. A part of the book is devoted to legislative and policy issues, reporting on the US and EU privacy legislation and the cost of privacy breaches in the healthcare domain. This reference is intended for professionals, researchers and advanced-level students interested in safeguarding medical data.

Salvador Sanchez-Alonso 2010-11-09 Metadata and semantic research is a growing complex ecosystem of conceptual, theoretical, methodological, and technological frameworks, offering innovative computational solutions in the design and development of computer-based systems. Within this perspective, researchers working in the area need to further develop and integrate a broad range of methods, results, and solutions coming from different areas. MTSR has been designed as a forum allowing researchers to present and discuss specialized results as general contributions to the field. This volume collects the papers selected for presentation at the 4th International Conference on Metadata and Semantic Research (MTSR 2010), held in Alcala de Henares--a world heritage city and birthplace of Miguel de Cervantes--at the University of Alcala (October 20-22, 2010). The first MTSR conference was held online in 2005, followed by two more editions: in Corfu (2007) and in Milan (2009). The experience acquired during the past five years, and the warm welcome of MTSR by the research community, encouraged us to organize this new edition of the series, and turn it into a yearly event. According to the number and quality of the contributions submitted for revision, our 2010 effort was again a considerable success.
